

ADDITION WITHIN 10 PROGRESS MONITORING

One skill, start to finish: the IEP goal, six ten-problem probe forms, and a graph scaled to the probe. Vertical, untimed. Fillable PDF.

ADDITION TO 10 Addition Within 10 – Goal and Directions

Goal, baseline, directions and benchmarks for one skill. Untimed; score is problems correct out of 10.

Ten addition facts with sums from 1 to 10, no repeats within a form, in random order, in vertical format. Doubles and plus-zero facts appear at their natural rate; nothing is stacked to make a form easier.

Sample goal — Invented; edit every bracket to fit the student
By [personal review date], when given 10 addition problems with sums to 10, [Student] will write correct answers to 8 of 10 problems on 3 consecutive weekly probes, as measured by teacher-scored addition probes.

Benchmarks toward the goal

BENCHMARK	TARGET DATE	TARGET SCORE	ACTUAL SCORE	MEET

Giving and scoring the probe

- ☐ Say: "Write the answer to each problem. Work across the rows. If one is hard, skip it and come back."
- ☐ Correct the right answer written under the line. Count problems, not digits, unless the goal says digits correct.
- ☐ Untimed. Note whether counting on fingers or a number line was allowed, as a condition in the goal.
- ☐ A blank problem is an error; write "skipped" on the log if it happens more than twice.

ADDITION TO 10 Addition Within 10 – Form A

Solve each problem. Write the answer under the line. Untimed.

How to fill it

- ☐ One row per student who has a goal on this skill.
- ☐ Baseline is the median of the first three probes.
- ☐ One column per weekly probe; write the score out of 10, not a percent, so the rows compare.
- ☐ Trend up, flat or down over the last four probes.
- ☐ Trend, up, flat or down over the last four probes.

What it is for

Grouping: When six students sit on the same goal, the individual graphs answer "how is this child doing" and nothing answers "who needs the same fifteen minutes." Rows that are flat together are a group; a row that is flat alone is a different question. Take this page to the data meeting instead of ten.

EXAMPLE A Filled-In Data Log (Invented Student)

Mateo is invented. Twelve weekly probes on addition within 10, the aim line, the change that three low points forced, and the criterion being met.

The goal, as written for Mateo, first grade (invented)
By May 20, when given 10 addition problems with sums to 10, Mateo will write correct answers to 8 of 10 problems on 3 consecutive weekly probes, as measured by teacher-scored addition probes (forms A–F).

#	DATE	FORM	CORRECT	ERRORS	GRAPHED	NOTES
1	9/8	A	4	6	4	baseline
2	9/9	B	5	5	5	baseline
3	9/10	C	3	7	3	baseline (median of 4, 5, 3 = 4)
4	9/17	D	4	6	4	counted on fingers from the first number every time
5	9/24	E	5	5	5	–
6	10/1	F	4	6	4	3 under aim line; taught counting on from the larger number
7	10/8	A	6	4	6	–
8	10/15	B	7	3	7	–
9	10/22	C	7	3	7	misses are the +3 and +4 facts
10	10/29	D	8	2	8	–
11	11/6	E	8	2	8	criterion met, 1 of 3
12	11/13	F	9	1	9	criterion met, 2 of 3

How to read the log

- ☐ Baseline was the median of three forms on three days: 4, 5, 3, so 4. Not the average, not the best.
- ☐ The aim line runs from 4 in week 1 to 8 at the goal date. Probes 4, 5 and 6 (4, 5, 4) sat under it three in a row, so the teaching changed and the change is written on the row.
- ☐ The notes name the strategy, not just the score. "Counted on from the first number" is the thing that was taught next; a score alone would not have said that.
- ☐ Criterion met on probes 11 and 12: one more consecutive probe at 8 or better and the goal is met. The next goal is subtraction within 10, or mixed addition and subtraction within 20.

PROGRESS MONITORING How This Pack Works

Goal, baseline, weekly probe, graph, decision. Six steps, one skill.

A progress monitoring goal needs a thing to count and a page to count it on. This file is both, for one skill: a goal written in the probe's own words, 6 equivalent forms of the probe that measures it, and a graph scaled to it. Nothing has to be built or found.

- Baseline.** Give Forms A, B and C on three different days. The middle score of the three is the baseline; write it on the goal page.
- Write the goal** from the six-part frame on the goal page. Start from the sample and change every bracket: the date, the condition, the criterion, the number of probes.
- Probe once a week** with the forms in rotation (A, B, C, D, E, F, A...). Never the same form two weeks running. Every form is ten items, untimed.
- Log and plot** the score the same day. Draw the aim line first, from the baseline on the left to the criterion at the goal date on the right, then plot each week's dot.
- Decide from the graph.** Three dots in a row under the aim line: change the teaching this week and write the change on the log. Three in a row over it: raise the target.
- Report from the log.** The log gives the progress report its numbers: baseline, the last two scores, and which facts keep coming back wrong.

The weekly routine, about five minutes

- ☐ Monday: pull the next form in the rotation (A, B, C, D, E, F, A...).
- ☐ Any day: give the probe one-to-one, untimed; ten items takes a few minutes.
- ☐ Same day: score it, log the row, plot the point, look at the last three points.
- ☐ Friday: if three points sit under the aim line, write the change you are making on the log.

Print and prep

- ☐ Print one copy per student per week: the student writes the answers on the form and that same sheet is the one you score.
- ☐ The teacher copy is the one you mark on; the student copy stays clean.
- ☐ Keep the goal page and the graph page for each student at the front of the data folder; type into them or write on them.
- ☐ The caseload page is one grid for every student on this goal; print it once a month.

What this probe is not
It is not a norm-referenced test and it carries no

Equivalent forms, and why it matters
Every form has ten problems drawn the same way.

Goal, baseline, weekly probe, graph, decision. Six steps, one skill.

A progress monitoring goal needs a thing to count and a page to count it on. This file is both, for one skill: a goal written in the probe's own words, 6 equivalent forms of the probe that measures it, and a graph scaled to it. Nothing has to be built or found.

What this probe is not

It is not a norm-referenced test and it carries no benchmark score. The sample goal uses invented criteria in brackets; your team sets the real ones from the baseline and the student's IEP. Every form is untimed and ten items long, so a score of 8 means the same thing on every form, and a student is never scored on speed.

Equivalent forms, and why it matters

Every form has ten problems drawn the same way, vertical, with no problem repeated within a form. Forms are drawn independently, so a fact can recur across the set — which is what a fact probe should do: the facts are the fixed set being learned. A score on one form means the same as a score on another, so the line on the graph is the student, not the paper. Rotate the forms and the page cannot be memorized.

Goal, baseline, directions and benchmarks for one skill. Untimed; score is problems correct out of 10.

Ten addition facts with sums from 1 to 10, no repeats within a form, in random order, in vertical format. Doubles and plus-zero facts appear at their natural rate; nothing is stacked to make a form easier.

Sample goal — invented; edit every bracket to fit the student

STUDENT	BASELINE	CRITERION	P1	P2	P3	P4	P5	P6	P7	P8	TREND	DECISION THIS MONTH

How to fill it

- ☐ One row per student who has a goal on this skill. Baseline is the median of the first three probes.
- ☐ One column per weekly probe; write the score out of 10, not a percent, so the rows compare.
- ☐ Trend: up, flat or down over the last four probes. That word, not the last score, is what the decision follows.
- ☐ Decision: keep going, change the teaching, or raise the target. A blank decision on a flat row is the thing this page exists to catch.

What it is for

Grouping. When six students sit on the same goal, the individual graphs answer “how is this child doing” and nothing answers “who needs the same fifteen minutes.” Rows that are flat together are a group; a row that is flat alone is a different question. Take this page to the data meeting instead of ten folders.

EXAMPLE

A Filled-In Data Log (Invented Student)

Mateo is invented. Twelve weekly probes on addition within 10, the aim line, the change that three low points forced, and the criterion being met.

The goal, as written for Mateo, first grade (invented)

By May 20, when given 10 addition problems with sums to 10, Mateo will write correct answers to 8 of 10 problems on 3 consecutive weekly probes, as measured by teacher-scored addition probes (forms A–F).

#	DATE	FORM	CORRECT	ERRORS	GRAPHED	NOTES
1	9/8	A	4	6	4	baseline
2	9/9	B	5	5	5	baseline
3	9/10	C	3	7	3	baseline (median of 4, 5, 3 = 4)
4	9/17	D	4	6	4	counted on fingers from the first number every time
5	9/24	E	5	5	5	–
6	10/1	F	4	6	4	3 under aim line: taught counting on from the larger number
7	10/8	A	6	4	6	–
8	10/15	B	7	3	7	–
9	10/22	C	7	3	7	misses are the +3 and +4 facts
10	10/29	D	8	2	8	–
11	11/5	E	8	2	8	criterion met, 1 of 3
12	11/12	F	9	1	9	criterion met, 2 of 3

How to read the log

- ☐ Baseline was the median of three forms on three days: 4, 5, 3, so 4. Not the average, not the best.
- ☐ The aim line runs from 4 in week 1 to 8 at the goal date. Probes 4, 5 and 6 (4, 5, 4) sat under it: three in a row, so the teaching changed and the change is written on the row.
- ☐ The notes name the strategy, not just the score. “Counted on from the first number” is the thing that was taught next; a score alone would not have said that.
- ☐ Criterion met on probes 11 and 12; one more consecutive probe at 8 or better and the goal is met. The next goal is subtraction within 10, or mixed addition and subtraction within 20.

The progress report sentence this log produces

“On weekly addition probes (10 facts with sums to 10, vertical, untimed), Mateo wrote correct answers to 4 of 10 at baseline in September and 8 and 9 of 10 on the two most recent probes in November. Progress is sufficient to meet the goal of 8 of 10 on three consecutive probes by May.” Every number in it is on the log above; nothing is from memory.
