CUT, GLUE, WRITE

12 cards, one winter word each. Three student pages go from gluing a card to writing a sentence.

SCORED THE SAME WAY

Every quick form (page 13) and the full-deck form (page 14) uses the same three marks.

PICTURES, NOT A SCRIPT

The pictures replace the word list a child cannot yet read; your scoring rule stays your call.

Start Here — Three Steps

Ninety seconds of reading. The cards themselves need no setup.

1

Print and cut the cards

Print the color card page (page 6) or the ink-saver page (page 7) on cardstock and cut on the dashed lines. The 12 cards touch, so every cut is one straight line.

Read the note on the card page once: 5 pictures have a second name a child may say, and how you mark that is decided before the first probe.

2

Use the cards and student pages

Show a card and the child names it, or hand over a student page: glue each card on its faint picture (page 9, ●), write the word for each picture (page 10, ■), or write a sentence (page 11, ▲).

Every student page has a My name line and one short instruction; nothing on it is written for an adult.

3

Probe, log and graph it

Mark a quick form (page 13) or the full-deck form (page 14) as the child names each picture.

Copy the correct-out-of-total onto the data log (page 15) the same day, plot the percent on the graph (page 16), and update the caseload page (page 17) on whatever schedule your team reviews data.

Send the family page (page 19) home the same week — it uses the same pictures.

WHAT THIS FILE IS

A fillable PDF with drawn picture cards built in. It works offline, with no account or subscription, and looks the same on every machine that opens it. Print the student pages; type into the teacher pages.

WHAT THIS FILE IS NOT

It is not an editable online slideshow or word-processor document, and it is not a norm-referenced or standardized test. It carries no elicitation, cueing or modeling script; it covers twelve winter pictures and how to mark and total the naming.

THE RULE EVERY PAGE IN THIS FILE FOLLOWS

This file does not decide what counts as a correct name, a criterion, or a typical rate for naming winter words. Every one of those is a blank you fill in from your own scoring rule and your team's judgment.

IF SOMETHING DOES NOT WORK

A field will not hold my typing. Open the file in Adobe Acrobat Reader (free) or Preview, not a browser tab.

I need a picture this deck does not have. Use the **Ask a Question** tab on the product page; a new picture is a free update where the art honestly shows the thing.

CONFIDENTIALITY, AND WHERE THIS FILE LIVES IN A CASELOAD FOLDER

A filled-in probe form, log or caseload page is a student record: initials only on anything that leaves your hands, first name only on the family page. Print the picture cards once and keep the set in an envelope with this file; the log, graph and caseload page stay in the student's data folder so the trend is the first thing anyone finds.

CHECKLIST

Quick Probe Forms A, B and C

Three forms, 6 pictures each, from the 12-word deck. Forms A and B split the deck between them with no overlap; Form C re-mixes 6 of the same pictures in a new order, since the deck is small on purpose (every picture has to be nameable by a young child). No picture repeats inside one form. Every picture is scored on the full-deck form, page 14.

STUDENT

DATE

FORM GIVEN (A, B OR C)

HOW TO MARK EACH PICTURE

Show a card, or point to the picture on this form, and the child names it. Mark + if the child says the word the way your own scoring rule counts as correct, – for a different word or no response, and ≈ for a close name (the naming note on page 6 lists them). What counts as which is this adult's call, written once and reused every session.

SOMETHING THAT WENT WELL

TWO MINUTES AT HOME: NAME WHAT YOU SEE

Look at a card together and say its name. Then find the same thing outdoors or in the closet — a scarf, a boot, a snowy day — and say the word again.

EXAMPLE

Filled Example

SAMPLE · INVENTED STUDENT

Every number in the read-out is re-counted straight from the table above.

Ivy is invented, and so is every mark on this page. Eight quick probes of naming winter pictures, Forms A, B and C rotating.

#	DATE	FORM	CORRECT	OUT OF	PERCENT	NOTES
1	9/8	A	2	6	33%	baseline
2	9/15	B	3	6	50%	baseline
3	9/22	C	2	6	33%	baseline
4	9/29	A	3	6	50%	said “shoe” for boot, marked ≈
5	10/6	B	4	6	67%	–
6	10/13	C	4	6	67%	–
7	10/20	A	5	6	83%	5 of 6, the highest score so far
8	10/27	B	5	6	83%	5 of 6 again, same as the last probe

READING THE NUMBERS

Sessions 1–3 (Forms A, B, C) scored 2, 3 and 2 of 6: baseline is the median of the three, 2 of 6, 33 percent. By session 8, Ivy scored 5 of 6, 83 percent — a 50 percentage-point rise from baseline. Every percent above is that row’s own correct count divided by 6, times 100, rounded to the nearest whole number.

A LINE THIS LOG COULD WRITE

“On winter picture-naming probes (6 pictures, untimed), Ivy named 2 of 6 pictures at baseline in September and 5 of 6 on the most recent probe in October.”

WHERE IVY WOULD SIT ON THE CASELOAD PAGE

One row: baseline 33 percent, current 83 percent, trend up, decision “continue current plan” — the same numbers this table already shows, carried onto page 17 in one line instead of eight rows.

WHAT THIS EXAMPLE IS NOT

One invented child’s eight sessions. It does not predict how quickly any real student will move, and it sets no typical rate for naming winter words — it exists only to show how the log, the table and the graph read once numbers are actually on them.

THE SESSION-4 NOTE

On session 4 (Form A) Ivy said “shoe” for the boot. The boot is on Form A, and its close name is listed on page 6, so the response was marked ≈. In this example the scoring rule does not count ≈ as correct, so it is not in that session’s 3 of 6. Another team could count it; the rule is whatever this adult wrote down once and uses every session.
